

MONOBLUE SafR

2nd GENERATION

ULTRA-PURE TRYPLAN BLUE + FREE RADICAL SCAVENGER

Arcad allows you to choose

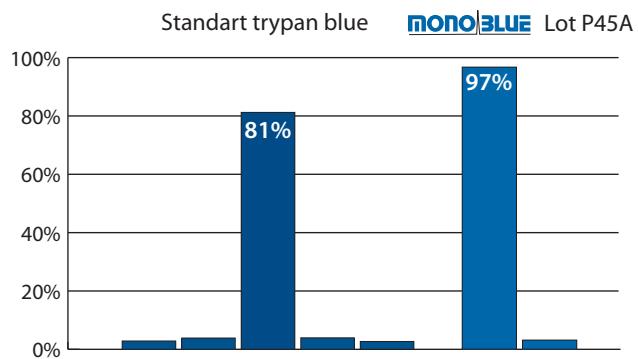

Ultra-pure Trypan blue 2nd generation

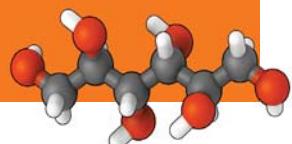

MONOBLUE SafR INCREASES THE SAFETY OF TRYPAN BLUE

■ An ultra-pure staining agent guaranteed by Arcad proprietary process.

- No O-tolidine
- No purple compound
- No mono-azo
- Phthalate free
- Preservative free
- Latex free
- Endotoxin: ≤ 0.5 UE/mL

MANNITOL, AN EFFECTIVE PROTECTIVE AGENT

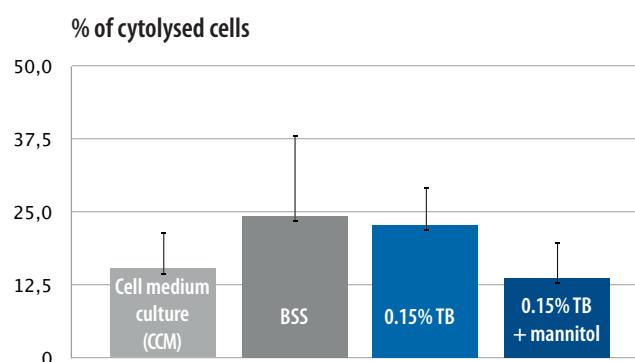

■ Mannitol improves the tolerance of trypan blue.

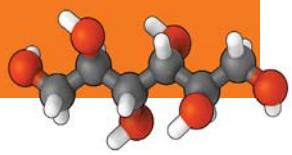

Number of cytolyzed cells in trypan blue with mannitol is lower than in trypan blue alone.

- Trypan Blue without mannitol: $22,73 \pm 6,6\%$.
- Trypan Blue with mannitol: $13,73 \pm 6,2\%$.

1. Study of human retinal ARPE-19 cells tolerance to various Trypan Blue solutions. (Datas Arcadophta)

MANNITOL, A FREE RADICAL SCAVENGER

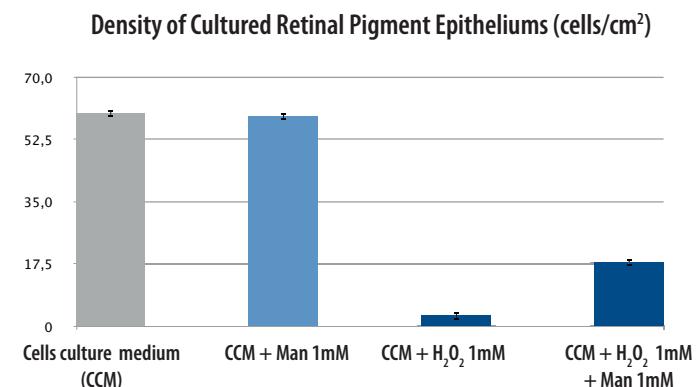

■ Mannitol: an effective anti-oxydant agent in intraocular use.

Mannitol is protecting retinal pigment epithelium cells from the oxidative effect of H_2O_2 .

Density of retinal pigment epithelium cells in:

- CCM + H_2O_2 1mM: 3 cells/cm²
- CCM + H_2O_2 1mM + Mannitol 1 mM : 18 cells /cm²
- CCM + Mannitol 1 mM: 59 cells /cm²

MONOBLUE SafR PRESENTATION GUARANTEES A CONTROLLED INJECTION

■ Sterile, apyrogenic, single use.

Required force of pressure on the barrel for the injection (N)

- Pre-filled 0,75mL syringe individually pouched.
- Long barrel to monitor the injected volume.
- Soft sliding plunger to smoothen the injection.

■ An effective staining for Capsulorhexis and various applications for an anterior segment use.

CAPSULORHEXIS: TO STAIN THE ANTERIOR CAPSULE OF THE LENS
